INTRODUCTION

Data Analytics professional with a Master's in Data Science & Analytics and hands-on experience in business intelligence, data analysis, and operational reporting. Skilled in Python, SQL, Power BI, Tableau, and Excel, with the ability to transform complex datasets into actionable insights and build data-driven solutions. Experienced in developing dashboards, analyzing trends and KPIs, and collaborating with cross-functional teams to support business decisions.

EDUCATION

- Florida Atlantic University (Boca Raton)** FLorida
Masters in Data Science and Analytics, GPA: 4/4 *August 2024 - May 2026*
Courses: Intro to Data Science, Data mining and machine learning, Intro to Business Analytics and Big Data, Computational Foundation of AI, Social Network/Big data Analytics, Reinforcement Learning, Deep learning, Information retrieval, Database management systems.
- RAIT, D.Y. Patil University** Navi Mumbai, India
Bachelor of Technology - Computer Engineering with minor in Data Science, GPA: 9.03/10 *June 2020 - May 2024*
Courses: Data Structures, Analysis Of Algorithms, DataWarehouses and mining, Artificial Intelligence, Machine Learning, Natural Language Processing, Big data analysis

SKILLS SUMMARY

- Languages:** Python, HTML, PHP, C, C++, SQL, PowerBI, Tableau, Snowflake
- Python Libraries:** NetworkX, PyPDF2, PDFminer, Tabula, Textract, Pandas, Matplotlib, Seaborn, Keras, PdfPlumber
- Tools:** GIT, MySQL(Oracle), Jupyter Notebook, VScode, Oracle Apex, Pandas, Numpy, OpenCV, Jira
- Soft Skills:** Leadership, Event Management, Team Work, Time Management

EXPERIENCE

- Electrical Asset Analyst Intern** On-Site
Carnival Cruise Lines *May 2026 - July 2026*
 - Bridge Instrument Report Dashboard:** Engineered an automated Power BI/Power Query pipeline consolidating Bridge Instrument Report data across 29 fleet ships
 - Vendor Report Auto-Renamer:** Developed a Python OCR-based document automation tool to intelligently extract and rename vendor service reports, streamlining marine operations workflows.
 - Forms Automation Pipeline:** Automated crew data collection via a Microsoft Forms-Power Automate-Office Scripts pipeline, improving logging efficiency for marine operations.
- Operations Manager** On-Site
Florida Atlantic University *Nov 2024 - May 2026*
 - Leadership:** Directed daily operations across the entire student union, ensuring a seamless and efficient experience for students and patrons.
 - Accountability:** Conducted facility inspections to uphold safety and security standards
 - Event coordination:** Supervised event programming and marketing initiatives
- Data Science Intern** On-Site
Tata Consultancy Services *Jan 2024 - May 2024*
 - Development:** Developed Python scripts to automate the extraction and validation of tabular data from PDF invoices and Excel files using PyPDF2, Tabula.
 - Implementation:** Implemented automated data validation procedures to identify and correct disparities between extracted data sources
 - Improvement:** Improved overall project efficiency by creating Python automation scripts for data extraction and comparison.
 - Agile Methods:** Leveraged Agile methodologies to streamline project execution, reducing manual efforts and ensuring timely delivery of milestones.
 - UI:** Designed an intuitive interface for efficient data visualization and presentation of results, facilitating better decision-making using Streamlit.

PROJECTS

- Analyzed global terrorism:** Utilized data analytics and predictive modeling, along with tools such as Power BI and Tableau, to analyze terrorism trends and forecast potential future attacks. Identified patterns in terrorist incidents, providing valuable insights to support security planning and decision-making. Contributed to the development of enhanced security measures by offering data-driven recommendations to mitigate risks and improve response strategies.
- Driver Drowsiness Detection System:** Working on this project, used the Python programming language to build a system to detect when a driver is feeling drowsy and alert them using an alarm. Using OpenCV and dlib to detect face. pyttsx3 to generate voice alert. numpy and scipy to calculate euclidian distance to compute the Eye Aspect ratio.
- Handwritten digit recognition using neural network:** In this project I developed a neural network model capable of accurately recognizing and classifying handwritten digits from images. In this project I utilized activation function ReLU and softmax which helps for classification in the final layer. The train data was randomly selected using random function. Additionally the categorical data is converted into numerical using One hot encoder.
- Amazon Warehouse Robot Navigation:** Designed and implemented a grid-world environment simulating warehouse navigation for autonomous robots. Applied Q-Learning, Deep Q-Network (DQN), and Actor-Critic algorithms to enable robots to learn optimal paths while avoiding obstacles and reaching target locations efficiently. Visualized learning progress with step-to-go curves and Q-tables, demonstrating improvements in navigation strategy. This project showcased practical applications of reinforcement learning for logistics and warehouse automation.

CERTIFICATES

- Certificate 1: Harvard Business School online certificate program: BUSINESS ANALYTICS
- Certificate 2: Harvard Business School online certificate program: Entrepreneurship Essentials
- Certificate 3: Virtual internship completion certificate: AWS Cloud Virtual Internship
- Certificate 4: Skill Enhancement Training on PROJECT MODELLING
